

The main subject of the project is supporting the social and labor market integration of detainees and released people, mapping, identifying and developing professional and methodological opportunities by developing green and soft skills and other universal and transversal competences.

We are exploring new opportunities and innovations in educational and supportive work with the target group, which means service expansion, professional/personal development and attitude change of professionals, and laying the foundations for the development of further projects in cooperation between two NGOs, which are different in their fields of expertise but which are definitely mutually stimulating in a coordinated strategic partnership.

The focus is on environmental awareness, attitudes and positive change (affecting everyone's future) in the case of a specific, closed, neglected target group with many barriers. The main need is to create a link (real and symbolic) between the possibility of "recycling" (social/labor market) and the reduction of environmental pressure (also through recycling).

The keyword of the project is therefore sustainability in both the social and environmental segments.

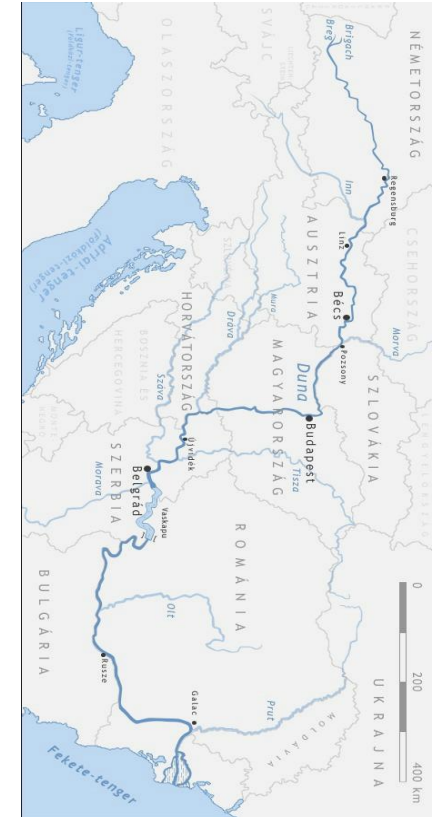

Activities implemented in the project:

- Project management: operational and professional coordination, documentation and dissemination of the partnership and the project's professional work.

- Transnational Meeting 1-3: the main objective and task is to create transnational face-to-face meeting opportunities and platforms, to exchange experiences and knowledge in both countries through relevant professional programmes and visits, to coordinate professional work, and to run the partnership through our professional work.

- International Training (within the partnership) (2 face-to-face sessions + online sessions): the main objective and task is to process a specific topic in a training-like way, thus gaining personal experience.

- Multiplier Events: the main objective and task is to present the tasks and results of the project;

- creating concrete outputs (Best Practice Bank, Methodological Summary Work, Educational aid for prisoners, testing).
